## PROJECTS

---

### AI-based Weather Forecast Support Development

July 2021 –

- Developing a search engine that finds similar satellite images from the past 40 years, given a query image. The final goal is to support the weather forecasters in Korea Meteorological Administration (KMA) to properly refer to the past situation that is the most similar to the current one and thus accurately predict the future weather of the Korean Peninsula.

### COVID-19 Task Force

Mar. 2020 – Sep. 2020

- Developed a model that fits and predicts epidemic events of COVID-19. Proposed a segmentation method that automatically and properly divides an epidemic event sequence and fits each sub-sequence using a simple model. This work was published in PLOS ONE (SCIE journal) “Simple Epidemic Models with Segmentation Can Be Better than Complex Ones” and presented in epiDAMIKS workshop at KDD 2021.
